

REVO Expands Deluxe Tabletop Range with SuperSignal DAB Radio Model

Press Release

Lanark, Scotland, November 26th 2013

REVO is delighted to announce the imminent release of SuperSignal, the second model in its acclaimed SuperSeries range of premium table radios.

SuperSignal shares the functionalist design philosophy and uncompromising quality ethos of REVO's recently announced SuperConnect hybrid radio, ensuring that it is truly a product without equal in the DAB radio category.

SuperSignal is equipped to receive DAB and DAB+ broadcasts, as well as traditional FM with RDS. Bluetooth® support is also included, meaning users can wirelessly stream music from their iPhone, Samsung, Windows Phone, Blackberry or other Bluetooth enabled device, including laptops and tablets – with no physical docking necessary. The addition of CSR's aptX® technology means that where supported by the transmitting device, streaming music will be at CD quality rather than the lower bit rate MP3 quality of standard Bluetooth.

For those wishing to use SuperSignal as a bedside radio, full digital alarm clock functionality is incorporated. SuperSignal allows for once, daily, weekday and weekend settings, and a dual alarm capability is included, as are Sleep and Touch-Snooze functions – the latter being activated by touching anywhere on the radio's aluminium front panel during alarm activation.

SuperSignal is an expression of REVO's design and engineering philosophy, and benefits from everything we have learnt in 10 years of award-winning product design and development.

Design and Construction / Aesthetically, SuperSignal is a balanced blend of modernity and mid-century charm, where classic functionalist design principles can be clearly seen. The outcome is a timeless design with a level of attention to detail that leaves a lasting impression.

A hand-crafted wooden cabinet has been selected for its superb acoustic properties, clad in furniture grade American walnut, no other material provides the deep foundations of great audio performance like wood. The use of high quality anodised T6 aluminium for the front facia and speaker grille, and pressing steel for the radio's backplate further inject a reassuring tactility and sense of honesty that cannot be achieved with lesser materials.

Audio and Technology / A large secret-until-lit graphical OLED display is paired with an intuitive joystick control, enabling quick and easy navigation.

Every aspect of SuperSignal's design and development has been geared towards its audio performance, from its all-wood cabinet through to the advanced audio electronics that lie at its heart. The result is an open sound with clarity, detail and deep rich bass - free from coloration and distortion and benefiting from a surprisingly expansive sound field. This class-leading audio performance is delivered courtesy of a 10W Class-D amplifier and patented BMR (Balanced Mode Radiator) loudspeaker technology.

Speaking of the new model, REVO's CEO David Baxter said "SuperSignal is the DAB radio we've always wanted to make. A stunning combination of wood, aluminium and steel, blended with category-leading audio engineering and timeless industrial design."

SuperSignal has an SRP of £179.95 and can be purchased from the 27th of November 2013 from REVO stockists including John Lewis, Selfridges, The Conran Shop and Amazon.co.uk

SuperSignal can be pre-ordered from today by visiting www.revo.co.uk

About REVO // Headquartered in the small market town of Lanark, Scotland, REVO is a specialist designer of digital radio and music streaming products. Our products blend the highest design principles with the very latest digital audio technology, the results push the boundaries of modern radio design. Whilst always looking to innovate, we believe in the principle that form should follow function and that attention to detail matters, good design elevates the user experience. REVO radios are designed exclusively in the UK and are the proud recipients of multiple Red Dot and iF product design awards and are double winners of What Hi-Fi? magazine's prestigious 'Radio Product of the Year' title. REVO radios can be found in some of the world's leading boutique and design hotels including most recently ACE Hotel London and LA, and Soho House London and NYC. REVO products are sold in over 20 countries worldwide. www.revo.co.uk
