

Introducing SuperSystem from REVO, the home stereo music system re-imagined.

Room-filling 2.1 audio, multiroom ready, iOS/Android app control and much more from REVO's flagship home music system.

Press Release

Lanark, Scotland, 24th September 2015

REVO is delighted to announce the imminent release of its new SuperSystem digital home music system, the flagship model in its acclaimed SuperSeries range of deluxe tabletop audio devices.

SuperSystem is the evolution of the classic home stereo, re-imagined by REVO for the age of digital music and wireless audio streaming. Thoughtfully designed to perfectly blend the time-honoured values of engineering, craftsmanship and material integrity, with next-generation all-digital technology, superlative room-filling acoustic performance and award-winning industrial design.

Deceptively compact yet delivering a full 80 watts of power from its Class-D amplifier, twin 3.5" BMR flat-panel drivers and custom designed ported subwoofer, SuperSystem delivers a feature-set that will become the benchmark in the small audio category.

Radio from around the world, wireless access and playback of your personal music collection or an almost limitless supply of songs from the world's leading music streaming service – all capable of being distributed to other compatible devices as part of a multiroom audio set-up and controlled from an iOS/Android smartphone or tablet courtesy of an easy-to-use app.

// **Feature Rich**

SuperSystem is equipped to receive a wide range of digital radio standards including DAB, DAB+, FM with RDS and internet radio – providing access to over 24,000 stations and podcasts from around the world. SuperSystem’s ability to communicate with external devices and services is unrivalled. Network Audio and WLAN technology enables wireless audio playback from external computers and music servers, Bluetooth® with aptX® delivers CD-quality streaming from smartphones, tablets etc., and Spotify Connect opens the door to over 30 million tracks from the Spotify archive in the Cloud. Also included is a front-mounted USB connector, enabling playback of audio files as well as USB device charging.

// **UNDOK Multiroom and Control**

UNDOK technology puts you in complete control of SuperSystem and its features and modes, including the ability to create a wireless multiroom system, all courtesy of the UNDOK app for iOS and Android. UNDOK centralises control of SuperSystem’s various functions including DAB, Internet radio and FM, Spotify Connect, Network Audio and USB audio playback. Music played via Bluetooth and AUX-IN modes can also be distributed across a multiroom network using the app. UNDOK technology links up to five SuperSystems or other UNDOK compatible devices (such as REVO’s SuperConnect radio) to create a sophisticated wireless multiroom system. Play different tracks in different rooms, or simply let a single song provide the soundtrack throughout your living space, all controlled from the palm of your hand via the UNDOK app.

// **Audio and Technology**

SuperSystem’s hardware specification is comprehensive. A large 2.7” secret-tilt graphical OLED display sits front and centre and is paired with an intuitive joystick based control system, enabling quick and easy navigation around SuperSystem’s many features and modes of operation.

Every aspect of SuperSystem’s design and development has been geared towards its audio performance, from its precisely crafted wood cabinet through to the advanced audio electronics that lie within. Wood has a resonant quality that cannot be matched by plastics or composite materials, it’s surface structure helps attenuate high frequency sound, creating warmth in the audio presentation. By employing cutting edge flat-diaphragm driver technology and all digital components, advanced sound modelling techniques and a carefully engineered bass porting system, our engineers have delivered category-defining performance. SuperSystem presents an open sound with clarity, detail and deep rich bass, free from coloration and distortion and benefiting from an expansive sound field. Beating at SuperSystem’s acoustic heart lies an 80 watt Class-D amplifier, twin 3.5” BMR flat-panel speakers and a dedicated 6” ported subwoofer. BMR (Balanced Mode Radiator) speaker drivers utilise flat diaphragm transducer technology and combine the performance attributes of a flat panel speaker with the pistonic movement of a conventional loudspeaker, resulting in a high performance compact drive unit that develops wide dispersion and an expanded sweet spot.

Alongside SuperSystem’s various wireless features such as Wi-Fi and Bluetooth®, it is blessed with a large array of physical connectors including 3.5mm headphone jack, USB for audio playback and device charging, AUX-IN, digital optical in, digital optical out, stereo RCA out, wired LAN, F-Type antenna connector and software update port.

// **Design, Materials and Construction**

Aesthetically, SuperSystem is a balanced blend of modernity and mid-century charm - perfectly proportioned, substantial, handsome. Already a winner of a prestigious Red Dot Product Design Award 2015, SuperSystem is a timeless design that exudes quality and leaves a lasting impression. A hand-crafted wooden cabinet has been selected for its superb acoustic properties, clad in furniture grade American walnut or subtle matt paint finishes, no other material provides the deep foundations of great audio performance like wood. The use of high quality anodised 6000 series aluminium for the front fascia and speaker grille, and pressing steel for the backplate further inject a reassuring tactility and sense of honesty that cannot be achieved with lesser materials.

The REVO SuperSystem is available in a choice of five finishes – American walnut and silver aluminium, American walnut and black aluminium, matt white and silver aluminium, matt black and silver aluminium and the all-black ‘Shadow Edition’.

SuperSystem has an SRP of £549.95 and can be purchased from REVO stockists including John Lewis, Mr Porter and Amazon.co.uk from early October 2015.

// **About REVO**

Driven by function and quality, our products blend the highest design principles with the latest digital audio technology, each designed to leave a lasting impression and to stand the test of time.

Founded in 2004 and headquartered in the small market town of Lanark, Scotland, REVO is a pioneer in digital radio and audio streaming and the recipient of seven Red Dot Product Design Awards.

REVO products are sold in 20 countries worldwide.
